6138R23	(PERIMENT sile of 38 PRIME FACTORS  Description (Pool 38 Prime FACTORS)	- A061385
RC		
BRZZCAC	Given an array arr of n integers and a positive integer num.	13BR236
	Let's suppose prime factorization of num is: $p^a x q^b x r^c x x z^t$ , where p,q,rz are prime numbers.	37
3CA0613	Sum of numbers in array arr at indices of prime factors of number num is: a x arr[p] + b x arr[q] + c x arr[r] + + f x arr[z].  You are given an array arr of size n and a positive integer num. You are required to calculate the sum of numbers in arr as mentioned above, and print the same.	,R23CA06
api	Note:	
38R2	<ul> <li>If arr is empty, print -1.</li> <li>If prime factor of num not found as indices, print 0.</li> </ul>	CR06138
38R23CA	Input Format:	
9	<ul><li>The first line contains an integer, i.e. n.</li><li>The second line contains an array arr of length of n.</li></ul>	13BR23
3CA067	The input will be read from the STDIN by the candidates.	3R23CA06
*	Output Format:	3653
38R	Print the sum that was mentioned in the problem statement.	25
	Example:	5CR06135
	Input: 6	
	11 21 32 45 1 23	28R23
	6	Ser 3 Berg
	Output:	60
	77	BE BOY
	Explanation:	5

```
6=2<sup>1</sup> x 3<sup>1</sup>
sum=1*arr[2]+1*arr[3]=1*32+1*45=77
```
